

LicenseWatch Enterprise

Cost Effective Control and Compliance

Start saving money on your software licenses today and eliminate compliance risks by using LicenseWatch. It is quick to implement and easy to use. Our customers see an average Return On Investment between only 3 and 6 months. Join over 650 other customers worldwide.

LicenseWatch is the leading tool to detect what software you have installed both on desktops and in your data center. No matter if it is installed locally, on virtual machines or on the web.

Cost Saving

With the LicenseWatch solution you know what software is being used and what software can be removed. Licenses can be reharvested; saving the costs of buying unnecessary new licenses or prevents costs of renewing maintenance on unused licenses. Furthermore, the advanced license program knowledge inside the tool helps organizations to get more out of their licensing agreements.

Minimize Risk

Installing software on computers in organizations by users can expose those organizations to compliance risks. Apart from the financial implications on non-compliance like unbudgeted license costs and fines, an organization is also faced with lost productivity and image damage because of bad press. LicenseWatch makes it possible to prevent installation of unwanted software and gives information on what software is installed where and how it is actually used.

Features and Benefits

LicenseWatch provides detailed inventory data, software recognition, contract and license management and powerful

reporting. It can save organizations hundreds of hours work interpreting raw inventory and usage data, optimizes contract and licensing agreements and giving up to date compliance reports.

The LicenseWatch VMware and Citrix integrations will enrich inventory and usage data with necessary data from these virtual platforms to ensure license compliance at all times. All reports can be exported to be used for internal reporting. With the report wizard users can create their own reports as they wish.

Key benefits

- Identifies where savings in software licenses can be achieved – up to 25%
- Eliminates non-compliance risks
- Optimize the returns on your software assets
- Get more out of your software agreements
- Better management decisions on software investments

ABOUT LICENSEWATCH

LicenseWatch provides you with cost effective control and compliance.

KNOW WHAT YOU HAVE

Our leading technology quickly tells you what software you have installed, how it is used, and what licenses you have to support this.

QUICK TO IMPLEMENT

With LicenseWatch there are no lengthy and costly deployment projects. Typically installed and configured within one working day, you can quickly start gathering your software information.

EXTENSIVE REPORTING

The reporting capabilities in LicenseWatch provides with the necessary information about your assets with up to date accuracy. With over 50 pre-defined reports and a Report Wizard, well informed decisions can now be made. All reports can be exported to Excel, Word or PDF format.

Technical information

INTEGRATION

When you are using Microsoft SCCM® (any version from 2003) we can use the information that is already available directly with in LicenseWatch using our SCCM Connector

VIRTUAL ENVIRONMENTS

Managing your software assets in a virtual environment can be a challenge. Not with LicenseWatch. Our Citrix and VMWare Connector will tell you exactly what you have and how it is used in these environments.

SOFTWARE PATTERN IDENTIFICATION

Our Software Pattern Identification will help you recognize the software in your environment. It will categorize the software found so that you can select on what software you want to spend your time and ignore unimportant software like patches/fixes or free software. The software values included in the database quickly identifies possible cost savings.
